

PRODUCT SHEET / SEPTEMBER 2026

Safire 1.7.0

Good ideas deserve a place to grow.

Safire is a local Markdown workspace for protected writing, connected projects, and practical research. Notes remain ordinary files in a folder you choose, with no required account or cloud service.

PLATFORMS

Windows x64, macOS Apple Silicon and Intel, Linux x64

STORAGE & LICENSE

Local Markdown vault
MIT-licensed software

What's new

Writing you can return to

Protected drafts survive navigation and restarts.
Compare conflicting edits, keep a separate copy, and recover unfinished notes from Home.

One consistent workspace

Warm paper and forest green by day; deep forest and gold after dark. Editor, projects, graphs, tasks, capture, and Help share one visual language.

Connected projects

Preview wikilink changes before renaming notes.
Explore an isolated Project map or mouse-rotatable 3D Full graph with fullscreen support.

Research worth sharing

Capture sources, record evidence, filter assessments, and create Markdown or designed HTML briefs with permitted public source URLs.

Local by design

A rebuildable catalog searches up to 100,000 notes, with explicit capacity notices. Daily notes, tasks, templates, attachments, and keyboard commands support everyday work. Optional integrations expose eight Markdown MCP tools and six attributed memory tools.

No telemetry, hosted sync, or automatic transcript capture. Notes, backups, drafts, and optional memory are plaintext. Web Clipper requests public pages only on user action; external links open in the system browser. Windows and macOS downloads are unsigned.
