At a Glance

Safire is a privacy-focused, local-first Markdown desktop app built around a simple idea: notes should be beautiful to work with, easy to connect, and remain ordinary files the user controls.

Product

Local-first Markdown knowledge workspace

Version 1.3.4

Current Safire version

Platform

Windows desktop app with local browser/developer mode

Storage

Plain `.md` files in a local vault folder

Boilerplate

25-word description

Safire is a local-first Markdown workspace for connected notes, visual graph exploration, daily workflows, attachments, and recoverable edits on Windows.

50-word description

Safire is a polished, local-first Markdown knowledge forge for Windows. Notes remain ordinary files in a folder the user controls, while Safire adds search, tags, wikilinks, backlinks, an interactive relationship graph, daily notes, task views, attachments, web capture, templates, autosave, and backup preview and restore.

100-word description

Safire is a privacy-focused Markdown workspace for people who want connected thinking without surrendering ownership of their files. Notes remain ordinary `.md` files in a local vault, while Safire adds a modern Windows desktop experience: split editing and preview, tabs, search, tags, wikilinks, backlinks, a force-directed relationship graph, daily notes, vault-wide tasks, templates, web capture, attachments, keyboard navigation, autosave, and backup preview and restore. Its application service binds to the local computer, and Safire does not include telemetry or a hosted sync service. Users choose their own backup or synchronization tools for the vault.

What Makes Safire Different

Beautiful but portable

Safire gives local Markdown files a polished desktop interface without locking notes into a proprietary database.

Connected notes

Wikilinks, backlinks, tags, local and global graph modes, filtering, grouping, and hover highlighting reveal relationships.

Trust-centered workflow

Autosave, backend backup-before-write, delete backups, backup preview, and restore reduce the fear of losing work.

Local-first privacy

Safire is built around a user-selected local vault and a loopback-only service, with no hosted sync or telemetry.

Safire is a knowledge forge: fast enough for daily capture, connected enough for deep projects, and local enough to stay yours.

Launch blurb

Introducing Safire 1.3.4: a local-first Markdown knowledge forge for Windows. Safire keeps notes as plain files while adding a refined workspace for links, backlinks, visual relationship mapping, attachments, daily workflows, and recoverable edits.

Social post option

Safire keeps connected notes grounded in plain Markdown: local files, a polished Windows workspace, wikilinks, backlinks, an interactive graph, tasks, templates, attachments, web capture, and backup restore.

Press angle ideas

- Local-first productivity tools are becoming more important as users reconsider cloud lock-in.
- Plain Markdown remains one of the most durable personal knowledge formats.
- Safire focuses on a polished owner experience without sacrificing file ownership.

Brand and Asset Notes

Primary logo: Safire flame mark. Use on dark or neutral backgrounds with clear spacing. Do not stretch, recolor heavily, or place over busy backgrounds.

Brand tone: focused, polished, trustworthy, creative, local-first, modern, warm, and technically capable without feeling cold.

Preferred wording: "privacy-focused, local-first Markdown knowledge forge" or "local-first Markdown workspace for Windows."

Avoid: calling Safire open source, promising that public source cannot be copied, implying built-in cloud sync or encryption, or implying third-party affiliation.
